

IN THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) Communication method between a network client and a network server, wherein a network document requested by the network client is sent from the network server to the network client and displayed by a browser of the network client to ~~the~~ a user for processing, ~~wherein the~~ method comprising recording and storing in the network server all changes and supplements to the network document carried out by the user ~~on the network document on the network client~~ are secured on the network client via software, the changes including changes to layout and embedding of a document page into an entire context, ~~and the changes and supplement being~~ stored in the network server as user-specific data and when the network document is loaded again by the user, restoring the network document ~~generated during previous loading on the network client through the interaction with the user, is restored~~ on the basis of the stored user-specific data.

2. (Original) Communication method according to claim 1, wherein the changes and supplements carried out by the user on the network document are at first intermediately stored on the network client in particular in the main storage or on the fixed disk.

3. (Original) Communication method according to claim 1, wherein the network server creates a specific region in a database for the user-specific data.

4. (Original) Communication method according to claim 1, wherein in a first loading of a network document, the network client or the user is identified.

5. (Original) Communication method according to claim 1, wherein the document changed or supplemented by the user is recorded

on the network client and is stored in the network server in a browser-independent format, in particular XML.

6. (Original) Communication method according to claim 1, wherein the stored user-specific data of the network server is interpreted on the network client and a format is generated therefrom which the network browser can read.

7. (Original) Communication method according to claim 1, wherein the changes and supplements carried out by the user on the network document are at first intermediately stored on the network client in particular in the main storage or on the fixed disk, wherein the network server creates a specific region in a database for the user-specific data, wherein in a first loading of a network document, the network client or the user is identified, wherein the document changed or supplemented by the user is recorded on the network client and is stored in the network server in a browser-independent format, in particular XML, and wherein the stored user-specific data of the network server is interpreted on the network client and a format is generated therefrom which the network browser can read.

8. (Currently Amended) Computer product which is suitable for carrying out all the steps of the communication method according to claim 1 ~~if the program runs on a computer~~.

9. (Original) Computer product according to claim 8, wherein the computer product is a computer program.

10. (Original) Computer product according to claim 8, wherein the computer product is a computer-readable storage medium.
